(a) Linear Response Speedup: Odd Mode ($\psi_2(x) = x$)
Frozen Hessian $H_*$ ($\lambda = 0.150$)
Full $D\overline{G}(\theta_*) = H_* + C_* R_* B_*$ ($\lambda = 0.365$)
Deterministic discretized STO orbit $\Phi_\delta(\mu_n, \theta_n)$
Particle Ensemble ($N = 10^5$)
Parameter Error $\|\theta_n - \theta_*\|$ [-]
Adaptation Steps $n$ [-]
(b) Linear Response Speedup: Even Mode ($\psi_{1,3} = 1, x^2$)
Frozen Hessian $\lambda_{\min}(H_{\text{even}}) = 0.087$
Full $\lambda_{\min}(H_{\text{even}} + C_* R_* B_*) = 0.235$
Deterministic discretized STO orbit $\Phi_\delta(\mu_n, \theta_n)$
Parameter Error $\|\theta_n - \theta_*\|$ [-]
Adaptation Steps $n$ [-]
(c) Stationary Density & Linear Response $R_* B_*$
Stationary Density $\mu_{\theta_*}(x)$
Linear Response $D_{\theta_1}\mu_{\theta_*}(x)$
Probability Density $\mu_{\theta_*}(x)$ [$x^{-1}$]
Sensitivity $[R_* B_* e_2](x)$ [$x^{-1}$]
Physical State $x$ [-]
