
Stationary Physical Measure $\mu_*(x)$
σ = 0.10 (Under-excited)
σ = 0.18 (Persistently excited)
Density $\mu_*(x)$
State x
Weak Excitation vs Persistent Excitation
σ = 0.10 (Stalled)
σ = 0.18 (Convergent)
$||\theta_n - \theta_{opt}||$
Adaptation Steps (n)
$\times 10^4$
Closed-Loop Drift Return Map
Target Drift (0.8x)
σ = 0.10 Fit
σ = 0.18 Fit
Drift $F_\theta(x_n)$
State x_n
